

LCP is a lounge chair formed from a single mould of clear acrylic plastic which folds back on itself in a spiral to create a radically innovative lounge chair. Only exclusive technology has allowed such flexibility, thus preserving the purity of the article's shape. LCP is elastic, soft and resistant even if it exudes an intangible and evanescent quality. It is available in 4 transparent colours: crystal, yellow, clear azure and orange. It is an outstanding and sophisticated chair for the most perceptive connoisseurs of design.
