

Mobil is a container system that boasts the merits of lightness, mobility, functionality, resistance and durability. For their design and the glamour of the colours offered, they are well suited to any home or office setting and meeting diverse functional needs. Surfaces and drawers come in three finishes: a charming semi-transparent effect, opaque and polished in the transparent PMMA version. The drawer, as opposed to the shelves and upper surfaces, is the basic feature of the system. Mobil can be a simple 2 to 6 drawer chest, with or without handles. It can also be composed of two side modules which are available in different heights across the range. The possible configurations can be supported on castors or fixed legs, suggesting the use of Mobil in various settings: from the bedroom to the lounge, also as a base for stereo systems, in the study or office as a set of desk drawers for storage of stationery and documents.
