

Design: Denis Santachiara - 2000

SANTAVASE

Can a flowerpot sprout directly from the soil rather than set down on the ground? Can, as the plant itself, which originates from the ground, require earth either flat or inclined? Santavase is just that, Santavase revolutionizes the concept of flowerpots, no longer set down but screwed half way into the ground by its steel finished point. For the designer, this represents a prosthesis and a prolongation of nature. Santachiara's flowerpot decorates the garden in an unexpected way, on its own or among others, upright or at a slight angle. For internal use a metal support has been made available.

Ø 40 x H.86 cm. Support H.41 cm.
